EDUCATION

University of Florida (UF) - Gainesville, FL

Expected Graduation: May 2028

Bachelor of Science in Computer Science | GIS Certificate

GPA: 3.78/4.0

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Programming Language Concepts, Information & Database Systems

SKILLS

Languages: Python, C++, Java, JavaScript/TypeScript, SQL, Bash

Software & Web: React, FastAPI, Flask, Node.js, PostgreSQL, REST APIs, SQLAlchemy

Cloud & DevOps: AWS, Docker, Git, GitHub Actions, Linux/Unix

Systems & Infrastructure: Data Center Operations, Server Hardware, IPMI/BMC, BIOS/UEFI, FreeDOS, TCP/IP

Data, CV & GIS: Pandas, NumPy, OpenCV, MediaPipe, Leaflet, GIS

EXPERIENCE

Database Mart | *Operational Engineering Intern - Kansas City, MO*

May 2026 - Jul 2026

- Assembled and provisioned 5-10 customer-specified bare-metal servers weekly, configuring GPU, memory, and storage hardware and performing validation and stress testing prior to deployment.
- Handled 20-30 production server service and maintenance requests weekly, completing hardware upgrades and replacements while troubleshooting boot, BIOS, thermal, and connectivity issues.
- Racked and deployed servers in the data center, configuring host networking and IPMI/BMC management and validating connectivity, hardware health, and system readiness.
- Developed and deployed a FreeDOS-based BIOS update automation system supporting ~30 Supermicro motherboard models, automatically matching firmware and enabling teammates to update outdated BIOS versions safely.

GeoPlan Center, University of Florida | *Research Assistant - Gainesville, FL*

Apr 2026 - Present

- Reviewed and processed Florida traffic crash records in Signal Four Analytics, using police narratives, diagrams, and map context to geocode crashes and validate roadway and location classifications.
- Developed internal automation-assisted data-processing and validation workflows to streamline crash-record review and improve classification consistency.

PROJECTS

Geography Dashboard | *React, TypeScript, FastAPI, PostgreSQL, AWS, Docker, Leaflet*

Nov 2025

- Built a full-stack geospatial analytics platform using React, TypeScript, FastAPI, PostgreSQL, Leaflet, and AWS to ingest CSV/GeoJSON datasets and generate DBSCAN clusters and density grids for city-scale analysis.
- Designed a decoupled hybrid-cloud architecture separating GIS processing from AI inference; automated Docker/GitHub Actions deployments and implemented cross-service tracing, structured logging, and rate limiting for reliability and cost control.

Ability Bridge | *Python, OpenCV, MediaPipe, PyAutoGUI*

Sep 2025

- Built a webcam-based assistive input system using Python, OpenCV, and MediaPipe FaceMesh for hands-free cursor control and Morse-code typing at ~30 FPS.
- Stabilized real-time head-pose and gesture control using solvePnP, EMA smoothing, hysteresis, and debouncing; implemented eyebrow-click and long-blink commands through PyAutoGUI.

UF Health SmartScribe | *JavaScript, Supabase, Deepgram, Gemini*

Oct 2025

- Built an AI medical-scribe prototype in a 24-hour designathon, streaming browser-captured audio through Deepgram diarization and Gemini to generate speaker-aware SOAP notes with ~5s prototype latency.
- Integrated Supabase authentication and PostgreSQL persistence for secure encounter storage and retrieval with human-in-the-loop editing.
